

John just finished work and is about to go to the grocery store for some food for dinner  
(By Jonathan Brennan)

John looked at the Kitchen Manager app to see what he has to pick up at the grocery store

Now John goes to the store and he knows exactly what he needs to get

Now John heads home for the night

John makes a nice dinner with the food that he just made  
(Chicken, corn, and carrots)

John update the Kitchen Manager with what he got at the store and what he used for dinner

Carrots: 1 lb  
Corn: 1 lb  
Milk: 1.5 Gal  
Eggs: 8  
Orange Juice: 1 Gal

John update the Kitchen Manager with what he got at the store and what he used for dinner

Savanna is driving home from work and realizes she hasn't been to the grocery store in a few days. She knows she has to stop by to make dinner, but does not have time to drive home, check the pantry, and come back to the store.

She then remembers she downloaded the Kitchen Manager app and checks her phone to see what types of food she could make tonight and selects a recipe that she already has most of the ingredients for. Her app, with premium, finds her the grocery store with the lowest prices for the items she needs.

Once in the grocery store, she checks the pantry section of her app and sees what all she needs to get for dinner that night.

While there, her app updates her about foods that she is out of or those that are expiring soon. She is able to grab those as well before heading home.

Once home with her groceries, she updates her pantry for both the groceries she just got and what she's about to use for dinner.

Savanna is able to make dinner in time for her kids to eat and make their team practices that night thanks to the Kitchen Manager app.
